243 only a few watchers are necessary. A pine
221 tree some 20 feet high is trimmed and set
674 firmly in the ground. The watchers climb this and spend hours standing uncomfortably in the crotches left by trimming the branches. Often several families may cooperate in watching, or several landowners may hire watchers, called *veladores*.

243 When the ears are well formed, but while
246 stalks and leaves are still green, fodder ("*rastrojo*") is cut. All stalks without ears, and the ear-bearing stalks above the ears, are cut, dried, carried to the house, and stored in sheds. This forms the principal fodder for animals. The stalks remaining in the field are not cut after the harvest, but animals are allowed to graze the harvested fields.

243 The main work of harvesting is done by men.
[462] Women bring food to the men, and they also glean, assisted by children. At harvest each man takes two rows at a time. The ears are picked, husked, and thrown in a round cane-
[482] splint burden basket (šundis) carried on the
[285] back with the aid of a tumpline. Ears which miss the basket belong to the gleaners, who also take the nubbins. When the basket is filled, the corn is piled at convenient spots.

243 The harvest is the busiest time of year.
464 Except for a few specialists, the sick, and the infirm, everyone works, either on his own har-
466 vest or as a laborer for someone else. Labor also comes from other towns. Wages are 40 to 50 centavos a day, plus the right to glean. Women and children follow the men of their own household and close supervision is necessary in order to prevent too many ears from being dropped or overlooked. The workday is about 7 hours. The larger landowners have tried unsuccessfully to eliminate gleaning by raising wages to 1 peso a day. Men refused to work without gleaning rights, despite the opinion of most objective observers that the maize secured from gleaning had less value than the additional wages. The landowners would have saved through eliminating supervisors. When the harvest is over, some farmers treat all their help to a few drinks of *aguardiente* (čaránda).

243 Most of the harvest is carried to town and
492 the storehouses on burros. Nets are used to hold the ears. Sometimes other animals are
[493] used, and for some fields employment of two-wheeled oxcarts is possible, although they are rarely used.
